

Safe documentation of bolting data – the new battery nutrunner **DA2docu**

NEW!

Constantly growing demands on production processes as regards digitalization, technical networking and transparency require new developments in the field of bolting systems.

Plarad's new battery nutrunner **DA2docu** is setting new standards in achieving high quality targets.

The ability of digital storage and documentation of more than 10 000 individual bolted joints and wireless transfer from bolting tool to PC meets the future requirements of the industrial production processes.

Furthermore the new **DA2docu** offers the following features:

- Documentation of bolt joint
- Detection of rotation direction
- GPS data acquisition
- Tools diagnosis and evaluation
- Data Transfer Software
- **DA2docu** will be supplied with a calibration certificate
